Why choose EZA solar panels?

Our products incorporate the latest PERC (Passivated Emitter and Rear Contact) cell technology: Current is generated not only on the surface of the cell, but also deep inside. PERC cells are more sensitive to light, which means they can be charged for longer periods: the daily charging range is increased, so you can start charging your batteries earlier in the morning and finish later in the evening.

RECHARGE YOUR ELECTRONIC ACCESSORIES IN ANY SITUATION!

Lightweight, compact and powerful, the EZA suitcase solar panel will recharge your small electronic devices easily when you're on the move. With high-performance PERC cells, the solar panel offers a cell efficiency of 20%.

The tilt of the panel is adjustable for a better orientation in the sun. Thanks to its compact format, you can take it with you wherever you go, move it around and stay in the shade whilst placing the panel in the sun.

Thanks to its water-repellent fabric, water slides off the surface of the solar panel, making it more resistant to rain and snow.
