"AGM" TYPE AUXILIARY BATTERIES SPECIALLY ADAPTED TO THE WORLD OF LEISURE.

"AGM" technology batteries are ideal for daily use in repetitive cycles with slow, deep discharges of electrical appliances such as fridges, lighting, heating, etc.

These service batteries are robust and allow discharge rates of up to 60% of the battery's capacity, so you can make the most of the energy available.

These batteries are sealed (can be positioned lying down) and require no maintenance, with a very low self-discharge rate: 1 to 3% per month. They are protected against pressure variations and designed to prevent gas build-up inside the battery.

For installation, they are supplied with adapters for fixing self-tightening terminals and terminals with butterfly clamps.
